The CeraPlus™ Skin Barrier with Remois Technology*

The importance of peristomal skin health in ostomy care can't be overstated. The condition of this skin greatly affects how well the skin barrier can adhere, as well as the general comfort and well-being of a person living with a stoma.

The Ceramide Advantage

Ceramide is a natural component of human skin, consisting of waxy lipid molecules. Ceramide links cells of the outer skin (epidermis) together to form a waterproof, protective barrier. Ceramides help prevent water loss that can lead to skin damage and dryness.

The CeraPlus Skin Barrier is Designed to Support Healthy Skin From the Start

It features a formulation infused with ceramide to help:

- Protect the skin's natural moisture barrier
- Helps keep your peristomal skin healthy
- Helps minimise moisture loss from the skin (transepidermal water loss – TEWL).

The Science of Skin Health Meets the Ultimate Urostomy Pouch.

* Remois is a technology of Alcare Co., Ltd.

Dansac TRE[™] Technology Explained

- The best skin is healthy skin.
- pH is a measure of how acidic or alkaline something is.
 pH 7 is neutral.
- Healthy skin has a pH between 4 and 6 which means it is slightly acidic. This is known as the acid mantle.
- Maintaining the acid mantle of the skin is essential to help protect its antimicrobial properties and maintain skin integrity.
- The acid mantle of the skin may become weakened if stoma output (which includes digestive enzymes), or perspiration stay in contact with the skin.
- Dansac's TRE technology is designed to protect and maintain the skin's acid mantle, so that it can go on working to protect you.

TWO-PIECE BARRIERS

The CeraPlus Skin Barrier with Remois Technology*

The Ceramide Advantage

Ceramide is a natural component of human skin, consisting of waxy lipid molecules. Ceramide links cells of the outer skin (epidermis) together to form a waterproof, protective barrier. Ceramides help prevent water loss that can lead to skin damage and dryness.

The CeraPlus Skin Barrier is Designed to Support Healthy Skin From the Start

CeraPlus is designed to support healthy skin from the start. It features a formulation infused with ceramide to help:

- Protect the skin's natural moisture barrier
- Maintain good peristomal skin health
- Minimise moisture loss from the skin (transepidermal water loss – TEWL).

Introducing the NEW Two-Piece CeraPlus Soft Convex Skin Barrier

* Remois is a technology of Alcare Co., Ltd.

Dansac NovaLife TRE The best skin is healthy skin

NovaLife TRE ostomy skin barriers

Takes skin protection to another level. Three to be exact.

- Available in flat, soft and firm convex barriers
- Stays in place, yet is easy to remove
- Designed to absorb stoma output and perspiration
- Maintaining normal skin pH helps protect it from damaging stoma output
- Two-piece wafers available late 2020

Hollister Colour Matching System

To help you select compatible components, every box label is colour-coded. First, select the proper skin barrier; then select a matching colour-coded pouch.

POUCHES

iberty freedom to live

A Great Pouch Becomes Even Better

Regardless of what the day brings, Hollister's urostomy pouch helps maximise discretion and comfort.

The improved New Image urostomy pouch from Hollister comes with a multi-chamber design and improved soft touch control flow tap.

- Odour-barrier pouch film
- Transparent and beige options
- Drain valve teardrop indicator
- Belt tabs
- Non-return valves

NovaLife

For confidence and security

Today, people demand functional, aesthetically designed products that suit their lifestyle. We believe that stoma pouches should be no different. Next to discreetness, security has the highest priority for people who wear stoma pouches. With NovaLife pouches, we have pushed the limits of design to make them as discreet and secure as possible.

- Low headspace
- Release tab for simple and secure removal
- Oval shaped barrier to suit the natural curves of the body
- Highly effective NovaLife filter
- EasiView[™] viewing option allows easy inspection of the stoma and facilitates positioning of the pouch
- Available in TRE, GX and GX+ barriers

Hollister Colour Matching System

ACCESSORIES

Infused with the Science of Skin Health

Presenting a full range of options to help support the healthy peristomal skin your patients deserve

Adapt CeraRing™ barrier rings – delivering the ultimate combination of fit and formulation.

Hollister Ostomy Care is dedicated to delivering products that provide an optimum fit to prevent leakage, along with the right skin barrier formulation for protection and maintenance of healthy skin. This full line of Adapt CeraRing barrier rings offers the benefits of a ceramide-infused formulation and custom-fit shape options to enhance the performance of both one and two-piece pouching systems.

Sealing in Skin Health

Dansac TRE seal is more than just a seal

 with three levels of protection, the Dansac TRE seal has been designed to help keep healthy skin naturally healthy.

Adhesion

Designed to provide a secure, flexible seal to protect the skin from stoma fluid and to be easy to remove.

Absorption

Helps absorb excess moisture to maintain skin's natural balance without the seal losing internal or external strength.

pH balance

Designed to help manage the skin-damaging effects of digestive enzyme activity.

Adapt CeraRing - Standard and Slim

Wound Drainage Collectors (Sterile)

Each	CODE	DESCRIPTION	QUANTITY
	9701	For Wounds up to 7.6 cm	Each

Non-Sterile Urostomy Night Drainage Bag

The AnchorFast Oral endotracheal tube fastener provides a convenient means to hold an oral endotracheal (ET) tube securely in place without the use of adhesive tape.

AnchorFast Oral Endotracheal Tube Fastener

Box of 12

CODE DESCRIPTION

9799

Provides a convenient means to hold an oral endotracheal (ET) tube (5.0-10.0 mm) securely in place without the use of adhesive tape and is designed to ease access to the oral cavity to help optimise oral care.

AnchorFast Guard Oral Endotracheal Tube Fastener – with the addition of integrated tube protection.

Box of 12

CODE DESCRIPTION

9800

Integrated tube protection sleeve helps prevent occlusion and designed to ease access to the oral cavity to help optimise oral care.

Unlike separate bite blocks, it's there before it's needed.

AnchorFast SlimFit Oral Endotracheal Tube Fastener

Box of 12

DESCRIPTION

9787

NEW DESIGN TO

ACCOMMODATE

SMALLER FACES

Provides a convenient means to hold an oral endotracheal (ET) tube (5.0 - 8.0 mm) securely in place without the use of adhesive tape and is designed to ease access to the oral cavity to help optimise oral care; with the intent to accommodate smaller faces.

AnchorFast Replacement Neck Band Straps

Box of 4

CODE

DESCRIPTION

9788

Used with AnchorFast and AnchorFast Guard oral endotracheal tube fasteners. Fastens with hook and loop closures.

Contents

AnchorFast Oral Endotracheal Tube Fastener

Address intubated patient risks - with confidence.

Every patient dependent on a ventilator for respiration is vulnerable. Ventilator-associated risks can result in increased length of stay and increased hospital costs.¹

RISKS of intubated patients	CLINICAL BENEFITS of the AnchorFast oral endotracheal tube fastener
VENTILATOR-ASSOCIATED EVENTS such as pneumonia, due to limited access to oral care.	EASES ACCESS TO THE ORAL CAVITY to optimise oral care. Findings suggest implementation of a comprehensive oral and dental care protocol can help reduce incidence of ventilator-associated pneumonia. ²
ORAL PRESSURE ULCERS from the tube resting too long in one place.	HELPS PREVENT FORMATION OF LIP ULCERS as part of a multifaceted approach. ^{3, 4}
UNEXPECTED TUBE OCCLUSIONS caused by the patient.	HELPS PREVENT TUBE OCCLUSION (ANCHORFAST GUARD ONLY) with integrated tube protection sleeve.

Tube attachment devices from Hollister provide an easy-to-use alternative to tape for securing tubes, drains, and catheters. Each device features a skin-friendly FlexWear skin barrier to help protect patient skin and an adjustable clamping mechanism to allow for easy tube positioning and better access for site care.

Vertical Tube Attachment Device (VTAD)

Box of 5

- Secures drains, tubes, or catheters (5-40 Fr) vertical to patient's skin
- Secures tubes at exit site
- · Sterile, latex-free

Feeding Tube Attachment Device (FTAD)

Box of 20

- Secures nasogastric/ nasointestinal tubes (5-18 Fr)
- Butterfly-shaped skin barrier conforms to patient's nose
- Unique swivel clamp eliminates pressure on the nares
- Latex-free

Identifying PMARSI and PMASD Skin Complications

PMARSI

Peristomal Medical Adhesive Related Skin Injury

- An occurrence in which erythema and/or other manifestation of cutaneous abnormality including but not limited to, Vesicle, bulla, erosion or skin tears persists for 30 minutes or more after removal of the adhesive.¹
- A medical adhesive can be defined as a product used to affix an external component (ie, tape, dressing, catheter, electrode, ostomy pouch, or patch) to the skin.¹

For more information: Refer to the Peristomal Skin Assessment Guide: http://psag.wocn.org

Skin Stripping

Adhesive skin injury related to the use and/or removal of the adhesive.

Skin Tear

A skin tear is a traumatic wound caused by mechanical forces, including removal of adhesives. Severity may vary by depth (not extending through the subcutaneous layer).

Tension Skin Blister

Adhesive skin injury related to the use and/or removal of the adhesive.

Ruptured Tension Blisters

Adhesive skin injury related to the use and/or removal of the adhesive.

Folliculitis

Inflammation where the skin becomes irritated, especially in the person who must shave routinely to maintain a seal or with removal of the pouch adhesive causing trauma.² Staph aureus is the most frequent microbial culprit leaving an erythematous and pustular area that resembles candidiasis.²

Orthopaedic Nurs. 2013: 32(5): 267-281. 2) Bonnie A, & Beck, DE 2008, Peristomal dermatology, Clinical Colon Rectal Surgery, vol.21, no. 1, pp. 41–44. 3) Colwell J, et al. MASD Part 3: Peristomal Moisture—Associated Dermatitis. J Wound Ostomy Continence Nurs. 2011: 38(5):541-553.

PMASD

Moisture Associated Skin Damage

Moisture Associated Skin Damage (MASD) caused by prolonged exposure to various sources of moisture and their contents including:³

- Urine or Stool
- Mucus
- Perspiration
- Saliva

Peristomal Moisture Associated Skin Damage (PMASD) - is defined as inflammation and denudation of the skin adjacent to a stoma associated with exposure to effluent such as urine or stool.⁴

For more information: Refer to the Peristomal Skin Assessment Guide: http://psag.wocn.org

Irritant Contact Dermatitis

Acute - Areas of skin loss and inflammation due to exposure to stool and/or urine. May be the result of leakage or an incorrect sizing of the ostomy barrier around the stoma.

Irritant Contact Dermatitis

Chronic - Areas of skin overgrowth and areas of skin loss/inflammation due to repeated exposure to stool and/or urine or an incorrect sizing of the ostomy barrier around the stoma.

Maceration

A condition caused by excessive amounts of fluid remaining in contact with the skin or the surface of a wound for extended periods.⁵

Fungal Infection

Fungal infection characterised by a confluent centre and distinct satellite lesions. The environment of the skin under skin barrier may enhance the incidence of peristomal skin infections because a warm, dark, moist environment that may be intermittently soiled by urine or stool, provides an ideal setting for microbial growth.

Allergic Dermatitis

Other - Skin develops an allergic reaction to a foreign substance, the body releases inflammatory chemicals and this results in irritated pruritic skin.

Trauma

Pressure injury may result from forces being exerted on the peristomal skin where opposing forces create tissue damage from higher pressures. May be present as localised injury to the peristomal skin and/or underlying tissues, and are often attributed to belts or incorrect skin barrier fit.

Hollister Skin Barrier Compositions

CeraPlus Ceramide Infused Skin Barrier

- Helps skin stay healthy from the start:
 - Retains moisture decrease in Transepidermal Water Loss (TEWL)
 - Replenishes skin's natural barrier

SoftFlex Standard Wear Skin Barrier

- Thin and flexible
- Gentle for frequent removal

FlexWear Extended Wear Skin Barrier

- Cross linkers offer erosion resistance
- Excellent flexibility
- High initial tack
- Durable yet gentle on the skin

Flextend Extended Wear Skin Barrier

- Strong adhesion and flexibility
- Highly resistant to erosion
- Swells to fit around stoma

Dansac TRE pH Buffering Technology

Proprietary formulation is designed to maintain the slightly acidic pH level of healthy skin, supporting an environment that is friendly for the skin — and unfriendly to the digestive enzymes, helping stop them in their tracks.

Skin Anatomy:

- Skins function is to keep moisture in and toxins out
- The skins acid mantle has a pH between 4.0-6.0
- Peristomal skin health is maintained when skin remains unbroken and the acid mantle intact

Physiology:

- Digestive enzymes in stoma output can be highly corrosive to skin cells
- Enzymes in their optimal pH environment break down protein-rich skin
- The result is Irritant Contact Dermatitis

Goals:

- To help manage the damaging effects of active digestive enzymes on skin
- Ensure a good seal around the stoma
- Select a seal that may reduce enzyme activity by shielding the acid mantle

Dansac NovaLife TRE ostomy barriers and TRE seal are specifically designed to help maintain the pH balance of naturally healthy skin.

Convex Barrier Options

Convex barrier products have been utilised to help provide a secure and predictable seal. Product selection is made by matching stomal protrusion and peristomal contours to the appropriate barriers. The outward curving of the convex skin barrier is designed to interface with the immediate peristomal skin.

This interface depends not only on the depth, rigidity and gradient of the convex skin barrier, but also on the shape and rigidity of the abdominal wall. For example, a flexible convex barrier can bend and move with the body; a firm convex skin barrier does not bend, rather it remains rigid. Appropriate barrier choice is left to the clinician's assessment of the patient and knowledge of ostomy products.

- Selecting the right convex product may require regular reassessment of products used, condition of the peristomal skin, and the pouching system wear time
- Some ostomy care nurses recommend an ostomy belt to enhance the effect of the convexity.

Barrier Example

Flat Skin Barrier

Flat Skin Barrier

- Flat peristomal plane
- Adequate stoma protrusion
- Centred stoma opening

Flat Skin Barrier with Round or Oval Convex Barrier Ring

Flexible Convexity

- Stoma flush with skin
- Uneven peristomal plane
- Firm abdomen

Index

Integrated Soft Convex Barrier

- Gentle pressure required to peristomal plane
- Flush stoma
- Peristomal injury

Integrated Convex Barrier

Firm Convexity

- · Creases or folds in peristomal plane
- Off-centred stoma opening
- Stoma retracted below skin surface
- Soft abdomen

Integrated Convex Barrier with Round or Oval Convex Barrier Ring

Firm Convexity with More Depth

- Recessed or flush stoma
- Uneven abdominal contours
- Off-centred stoma opening

²⁾ Hoeflok, J et al. Use of convexity in ostomy care: A Comprehensive Review. JWOCN, January/February 2017.

¹⁾ J.C. Colwell, M.T. Goldberg, & J.E. Carmel (Eds). (2015). WOCN Society Core Curriculum Ostomy Management. Chapter 10. Philadelphia, PA: Wolters Kluwer.

Using Convexity

Convexity is the outward curving of the skin barrier and is designed to interface with the immediate peristomal skin. Convex skin barriers promote a good fit between the ostomy pouching system and the peristomal skin where flat barriers would be unsuccessful. This is achieved as the convexity barrier pushes on the surrounding skin, opens or flattens skin folds, fills uneven surfaces or helps the stoma protrude more.

Stoma that is below skin level

Convex skin barrier in place

General Information

- A secure and reliable seal between the peristomal skin and ostomy skin barrier is necessary to protect healthy peristomal skin from stoma discharge
- Skin barriers are either convex or flat. Convex simply describes the shape of the barrier
- Convexity may be recommended to increase the wear time of the ostomy pouching system
- · Convexity may be firm or soft

Assessing for Convexity

- A simple patient assessment methodology can assist in determining the need for convexity. Refer to the Hollister FIT Indicator Tool (www.hollister.co.nz/education)
- Assessing when convexity is required should be done in consultation with an ostomy care nurse
- Ideally the patient should be assessed in the sitting position
- The pouch should be removed prior to assessment
- A distal stoma assessment is recommended for all loop stomas

Off Centred Stoma Opening

Retracted Stoma

Flush Stoma

Uneven/Irregular

Flaccid Abdomen

Convexity May be Considered When:

- Stoma Assessment
 - Liquid/Loose stoma output
 - The opening of the stoma is at or below the skin surface
 - The opening of the stoma is off-centre
 - The stoma protrudes <3/4" (20 mm) or is retracted below the skin surface
 - The stoma becomes flush/retracted during peristalsis (telescopes)
- Peristomal Assessment
 - The peristomal topography is uneven or irregular
 - The abdominal tone is flaccid.

Convex Products

- Convexity can either be built into the pouching system (integrated) or added with an accessory to the skin barrier
- Convexity is available in one-piece and two-piece options
- Convexity is available in pre-sized or cut-to-fit options
 - Note: When using cut-to-fit options for oval or irregular shape stomas, choose a barrier that is closest to the largest measurement so the convex curvature of the barrier is as close to the stoma as possible
- Soft convexity can be integrated into the pouching system or created by adding a convex barrier ring to a flat onepiece pouching system
- Firm convexity can be integrated into the pouching system or created by adding a convex barrier ring to a convex barrier to deepen the curvature when necessary

Soft integrated convex barrier

Soft convexity created by adding a convex barrier ring to flat skin barrier

Firm integrated convex barrier

Firm integrated convex barrier with convex barrier ring to deepen the curvature

Additional Considerations

- The following peristomal conditions do not preclude the use of convex products, however, caution and frequent reassessment is recommended in patients with, Pyoderma Gangrenosum, Caput medusa (peristomal varices), Pressure injury, Crohn's ulcers, Parastomal hernia
- Patients should be encouraged to contact an ostomy care nurse if there are stomal/peristomal changes, pouching system leakage or weight gain/loss

Where a Soft Convex Skin Barrier May Improve Fit

Case 1: Parastomal hernia with flush stoma¹

A parastomal hernia may create a bulge on the abdomen. When convexity is clinically indicated, a firm rigid convex barrier may pose the potential for pressure related skin damage.

A flexible soft convex barrier may be an appropriate solution.

Case 2: Firm abdomen with pressure injury from use of firm rigid convexity^{2,4}

Pressure ulcers may be more likely when a firm convex barrier is pressing against the skin for a prolonged period of time, especially with the addition of an ostomy belt.

A flexible soft convex barrier may provide the correct fit while removing the cause of pressure.

Case 3: Stoma located in a crease³

A firm rigid convex barrier may not conform to the abdominal contours and "pop off" when used in a creased area.

A flexible soft convex barrier may be considered a more appropriate fit.

Case 4: Stoma located in abdominal folds^{2,3}

Abdominal folds can compromise the seal of the barrier. A convex shape can enhance the barrier fit.

A flexible soft convex barrier may match to the correct depth of the folds, conform to the abdominal contours and provide less peristomal pressure.

J.C. Colwell, M.T. Goldberg, & J.E. Carmel (Eds.). (2004). Fecal & Urinary Diversions: Management Principles. In Chapter 12 and Chapter 14. St. Louis, MO: Elsevier Mosby

Case 5: Stoma height less than 20 mm (2 cm)³

A stoma that does not protrude above the skin may cause leakage problems under the skin barrier.

A flexible soft convex barrier may provide the right depth of convexity to help with stoma protrusion.

Case 6: Immediate post-op stoma with firm distended abdomen and off-centred lumen at risk for mucocutaneous separation^{2,5}

A mucocutaneous separation may occur as a result of poor healing, infection, or excessive tension at the mucocutaneous junction.

A flexible soft convex barrier may help achieve a correct fit with less pressure at the base of the stoma.

Case 7: Loop stoma³

The distal limb (arrow) of a loop stoma may discharge mucous which can undermine the barrier seal.

A flexible soft convex barrier may help provide the right fit with less pressure around the stoma to minimise undermining.

Case 8: Pyoderma gangrenosum^{2,4}

Trauma to the peristomal skin may initiate and aggravate a pyoderma gangrenosum ulcer. Efforts should be made to alleviate pressure and friction.

A flexible soft convex barrier may provide less pressure than firm convexity.
